Kerem Yiğit Elbasan

CROSS-PLATFORM MOBILE & FULL-STACK DEVELOPER

kerem@keremelbasan.dev · +90 543 711 77 10
Niğde, Turkey
keremelbasan.dev · github.com/nydeilith · linkedin.com/in/key51

Third-year Computer Engineering student who ships and maintains production software: a cross-platform prayer and lifestyle app released on Google Play in 11 languages, and a full-stack gamified productivity platform on Firebase. Looking for a software engineering internship in mobile or full-stack development.

EDUCATION

B.Sc. Computer Engineering — Niğde Ömer Halisdemir University

Expected Sept 2028

GPA **3.31 / 4.00** · Third-year student

Coursework: Data Structures, Object-Oriented Programming, Algorithms, Discrete Mathematics, Linear Algebra, Probability & Statistics.

SELECTED PROJECTS

Taqwa — Cross-Platform Prayer & Lifestyle App ·

2026 – Present · Google Play

Independent Developer

React · TypeScript · Capacitor · Firebase · Android (Java) · PWA

- Sole developer of a **59K-line** cross-platform product released on Google Play with **1,000+ downloads**, spanning Android, PWA, **11 languages**, RTL layouts, offline language packs and Firebase-backed sync.
- Engineered a fault-tolerant notification system that calculates prayer times 14 days ahead, deduplicates schedules, verifies the OS queue, respects iOS notification quotas and handles revoked Android exact-alarm access.
- Extended Capacitor with Java-based native Android bridges for home-screen widgets and live prayer-window notifications — functionality not available through the web layer alone.
- Built a release-quality engineering pipeline: **1,000+ automated tests**, Firebase emulator security-rule tests, Playwright E2E/visual tests, Android builds and a 270 KB gzipped startup-performance gate.

Meritee — Gamified Productivity Platform ·

2025 – Present · merite-app.web.app

Independent Developer

React · TypeScript · Firebase Cloud Functions v2 · Firestore · FCM · i18next

- Launched an offline-first productivity web app: instant local hydration with debounced Firestore sync, so users keep working without a connection and never lose state when switching accounts.
- Shipped serverless features on Cloud Functions v2 — scheduled personalised push notifications with dead-token cleanup, and real-time friend requests via triggers.

Data, ML & Automation Tooling · *Python*

2026

Python · PyTorch · Hugging Face Transformers · scikit-learn · SQLite · Whisper · OpenGL

- Competitor-review analyzer: scraped Play/App Store reviews of 20 rival apps, scored sentiment with RoBERTa and clustered complaints (sentence embeddings + K-Means); reading text, not stars, surfaced complaints hidden in 5-star reviews.
- Outreach pipeline (~700 companies): site crawling, mail-server checks, rubric scoring, personalised drafts in a human-approval queue and scheduled sending.
- Short-form video automation: Whisper word timing on Arabic audio, offscreen GPU shaders (moderngl), loudness-normalised ffmpeg exports.

SKILLS

Programming	TypeScript, JavaScript, Java, Python, C++, SQL
Frontend	React 18, Zustand, Tailwind CSS, Vite, Framer Motion, i18n & RTL, PWA
Mobile	Capacitor, native plugin bridging, local notifications, Play Console
Backend	Firebase Auth, Firestore & security rules, Cloud Functions v2, FCM
Practices	Vitest, golden & regression tests, bundle-budget CI gates, Git / GitHub

PRODUCT & COMMUNITY

YouTube — @TaqwaPrayer

1,148 subscribers

Product content for the app's own channel, driving organic discovery and user feedback.

LANGUAGES

Turkish (native) · English (C1, advanced) · French (A2, working toward B1)
